Challenge

Source Capture Diesel Exhaust

Volume

(5) Five Fire Trucks

Solution

Plymovent Emergency Vehicle Exhaust System (1) Straight Rail Assembly (STRA) system and (4) Sliding Balancer Track Assembly (SBTA)

“The Plymovent Vehicle Exhaust System has been 100% trouble free.”

“Pugwash Fire Department reviewed several different systems available on the market today and we are convinced we have the best system installed in our station.”

Andy Yarrow, Fire Chief
Pugwash Fire Department,
Pugwash, Nova Scotia

Single lane back-in, SBT

The PlymoVent SBTA system is designed to connect to any motor vehicles tailpipe and capture virtually 100% of the exhaust emissions. The SBTA system is used in single back in bay applications where the vehicle tailpipe is within 40’ of the exiting door. Everything is automatic from the fan activation to the automatic release from the exiting vehicle. All that is required is a simple one step connection of the system to the vehicle when entering quarters.

Drive Thru, STR

The PlymoVent STR system is designed to connect to any motor vehicle tailpipe and capture virtually 100% of the exhaust emissions. The system is ideal for drive through bays or bays where up to 4 vehicles are parked in tandem. Everything is automatic from the fan activation to the automatic release from the exiting vehicle. All that’s required is the simple one step connection to the vehicle’s tailpipe when entering quarters.
