Water Born Paints

Volume
14,000 CFM & 1.5 MBTU

Solution
*UniCure Zapper 3007
2 Bay Prep Station*

Crown Collision
Downy Ford Saint John
Saint John, NB

Crown Collision has become one of the most advanced collision repair shop in new brunswick with there new building on

crown street in Saint John.

Atlantic Air cleaning was very fortunite to work with Downy Ford on there new project. Downy Ford wanted to creat a shop with perfect frlow from a prepstation area through to a paint booth and mix room. Atlantic air Cleaning was able to custome size both the paint booth and the prepstation to fit there existing building and maximizie there work areas.

One of the modifications was removing a support for the prepstaiton and cantlivering it back 5 feet to leave room for the cars to make there turns into the prep area. Atlantic air cleanig also extended the length of the booth to allow for longer vichals and adtionel painting area for parts.

The 1006 Unicure Zapper serias paint booth has 14,00 cfm capabiltys with a 1.5 MBTU MAU unit supporting its production. This model also has advanced airborne contols standered built into the operations.
